GitHub for Teachers

Practical training | School Google account | 10-15 minutes

Goal: Create a GitHub account, create a repository, upload a sample document, and share the repository link.

1. Sign up using your school Google account

Open github.com/signup. Choose **Continue with Google** if available. Select your school account, then follow the prompts to choose a GitHub username and complete any verification. If the Google option is not shown, register with your school email and verify it.

2. Create a repository

Sign in to GitHub. Click **+** (top right) and choose **New repository**. Enter **My-Teaching-Materials**. Choose **Public** only for approved sample teaching materials. Tick **Add a README file**, then select **Create repository**.

3. Upload your sample file

Inside the repository, click **Add file > Upload files**. Select a sample **HTML, PDF, Word, Excel, PowerPoint, or image** file. Click **Commit changes** to save it. For browser uploads, keep individual files under 25 MiB.

4. Share your repository link

Copy the URL from your browser address bar and send it to the IT Coordinator. Example: https://github.com/teacher-ahmed/My-Teaching-Materials

5. Optional: Publish an HTML website

Upload a file named **index.html**. Go to **Settings > Pages**. Under Build and deployment, choose **Deploy from a branch**, select **main** and **/(root)**, then save. Your site can appear at https://teacher-ahmed.github.io/My-Teaching-Materials/. Publishing may take several minutes.

Teacher practical activity

Upload one sample file (for example, lesson-plan.pdf or index.html). Open it in the repository and submit the repository URL to the IT Coordinator.

Safety and school account notes

Never upload student data, marks, personal details, passwords, or confidential school documents to a public repository. Google Workspace administrators may restrict third-party sign-in and may need to approve GitHub. Signing in with Google does not give GitHub your Gmail password. A repository can be Private if files should not be public, but access must then be granted explicitly.

Quick checklist

■ Signed up ■ Created repository ■ Uploaded file ■ Committed changes ■ Shared URL
